

## Security in the Mobile Workplace

### PROGRAM OVERVIEW

Mobility isn't the next big thing—it IS the big thing. Laptop computers are the norm, allowing employees to be productive not only in the office, but also at home and on the road. BlackBerrys, PDAs, and other handheld devices and smartphones can be seen in nearly every traveler's hands. Now they are IP-capable, always on, and the risk of data breaches is higher than ever.

Today, mobility is bigger than Wi-Fi and cellular, and security is more than just a firewall. What happens when these two concepts meet? Challenges arise. Remote and mobile users are using a variety of applications on a variety of devices. Ensuring security is quite complex.

Hill Associates' one-day program *Security in the Mobile Workplace* addresses the challenges of securing the mobile enterprise.

The program has five primary objectives.

- Explain the difference between wireless access and mobility
- Discuss the phases of mobile evolution for a business
- Create a methodology for establishing holistic mobility
- Define the intersection of information security principles and mobility
- Identify the challenges mobility brings to business, and the tools that can mitigate the risks of mobile solutions

Hill Associates will customize the program to meet your program goals. We will work with you to identify the specific solutions you wish to discuss, to understand your particular challenges regarding competition, and develop case studies that focus on specific challenges facing your customer's business.
